ABSTRACT

Information on degrees awarded in the nation and the south, by race, for 1978-79 and trends from 1968-69 to 1978-79 are presented. For 1978-79 doctoral degrees awarded, there was a nationwide increase of 1.9 percent and a 4.5 percent increase in the South. There was a decline in the number of master's degrees awarded both nationwide and for the South, and the number of degrees awarded at the baccalaureate level remained stable. The pattern of annual increases in the number of first professional degrees continued nationally and for the South, and the number of associate degrees awarded both national and in the South decreased. Blacks accounted for 6.8 percent of the total associate, bachelor's, master's, first professional, and doctoral degrees awarded in the nation, and for 11.3 percent in the South. Black representation nationally, and in the South, was highest at the associate level and lowest at the doctoral level. The drop in the number of master's degrees awarded to blacks was 4.6 percent nationally and 6.9 percent in the South. The largest increase in the degrees awarded to blacks in the South occurred at the associate level (16.6 percent) followed by first professional and doctoral degrees (approximately 10 percent). The 1978-79 data reveal continued lessening of the role played by historically black institutions. Blacks outpaced whites in the proportion of degrees in teacher education at the master's and doctoral levels. The field of business and management increased in popularity with blacks, and blacks increased their share of graduate degrees in engineering. (SW)

FOREWORD

College students became more aware of the job market in the Seventies, and chose their majors accordingly. Thus, some dramatic shifts in the pattern of degrees granted over the 10-year period from 1968-69 to 1978-79 are highlighted in this edition of the SREB series on degrees awarded. For example, at the undergraduate level, students moved away from the study of teacher education, languages, mathematics, and the physical and natural sciences and chose instead to follow courses of study leading to better job prospects, in agriculture, business and management, computer science, engineering, and the health professions.

One major concern is the marked falling off of degrees in what has come to be known as the "high technology" fields, including the hard sciences and mathematics. Although two of these fields (engineering and computer science) have shown growth at the baccalaureate level, the production of engineering doctorates is far off the pace of a decade ago. In its latest annual report to Congress on the state of science and technology, the National Science Foundation concludes, "The most pressing and immediate problem in engineering schools and computer science departments is the acquisition, retention, and maintenance of high-quality faculty." The effects of these shortages upon the economy and upon the scientific leadership role of the nation may not become fully evident until the approach of the next century.

The problems of these high technology manpower shortfalls are sometimes shrugged off as stemming from failure of the elementary and secondary schools to mobilize the full talent of young people in mathematics and science curriculums. But much of the explanation of these shortages can also be placed on the doorsteps of colleges and universities, whose requirements for admission have become increasingly relaxed--first under the Sixties' influence of the search for "relevance," followed by the Seventies' slowdown in overall growth of higher education and a consequent heightening of competition for students.

Meanwhile, black citizens are continuing to gain increased access to higher education, but the annual number of earned degrees is up only slightly. At the end of the Seventies, degrees awarded to blacks remained heavily concentrated at the two-year or associate level. The numbers diminish sharply and successively as one moves up through the baccalaureate, master's, and doctoral ranks. Improvement of representation by blacks in areas of critical manpower shortage continues to be suggested as a means for simultaneously dealing with problems on two fronts--the manpower needs of society and the opportunity needs of minorities. Overall progress in resolution of these two problem areas has been slow, but visible improvement of black participation at the associate and baccalaureate levels gives promise for gradual acceleration in production of advanced degrees by blacks.

A 10-YEAR PERSPECTIVE ON DEGREES AWARDED

The changing face of higher education in the South and the responsiveness of postsecondary education to employment opportunities can be viewed by examining trends in earned degrees by discipline and level over the past decade.[1]

Today, for example, teacher education programs account for a far greater slice of master's and doctoral degrees than was true 10 years ago. This growth in advanced teacher education degrees is due in part to the statutory linking of educational administrator and teacher pay schedules to the accumulation of graduate credits and degrees. State certification requirements that call for veteran teachers to pursue continuing education on a regular basis also have influenced the substantial growth of graduate teacher education degrees.

Advanced degrees in engineering are in short supply, despite the critical need for Ph.D.-trained faculty. Between 1968 and 1978, while undergraduate engineering awards soared, doctorates in engineering registered an absolute decline. A pivotal factor in this decline, observers note, is the meager advantage in starting salary which is offered by industry to individuals with the doctorate in engineering, compared with those holding only a baccalaureate degree.

---

[1] For documentation of this section, the reader is referred to Tables P and Q.

Computer science is a field in which there is considerable demand for graduates at all levels. There has been a percentage increase in the share of computer science degrees during the 10-year period, although the field still accounts for only a small fraction of total degrees awarded. It appears that degrees in computer science have increased at the expense of mathematics and engineering, two fields to which the discipline closely relates. Thus, it might be concluded that students with mathematical or engineering aptitude are being attracted to computer science because of its brighter employment prospects, particularly at the graduate level.

The physical science areas have registered a pronounced decline in their share of earned degrees over the decade, a decline which can be explained in part by the phase-out of massive federal programs that sparked increased degree production in these fields during the post-Sputnik era of the early Sixties.

In some academic fields, growth or decline trends are similar at all degree levels. Broad growth at all levels was displayed by the fields of agriculture, architecture, business and management, computer science, health professions, psychology, and general and interdisciplinary studies. Decline occurred across the board in the fields of foreign languages, letters (particularly English), mathematics, physical sciences, and social sciences.

Beside engineering, fields in which growth at the bachelor's level has not been matched by expansion in advanced degrees are fine and applied arts and the biological sciences. Although education increased greatly at the graduate level, it declined significantly at the baccalaureate level, where

dim employment prospects due to the oversupply of teachers, in the Seventies, sometimes prompted students to pursue graduate study as a stop-gap.

Areas of substantial increase at one or more degree levels are: agriculture (baccalaureate), business and management (baccalaureate and master's), home economics (baccalaureate and doctoral), and religion (doctoral). Individual areas of major decline are: education (baccalaureate), and library science (baccalaureate).

In the field of religion, declines at both the bachelor's and master's levels were matched by a large increase of doctorates, apparently resulting from popularity of part-time study for degrees like the Doctor of Ministry, which is attractive to clergymen in full-time employment.

GENERAL SUMMARY OF 1978-79 DATA

Degrees Awarded in the Nation and the South, by Race, 1978-79 is one of a continuing series of SREB reports based on earned degree data collected by the National Center for Education Statistics (NCES).[2]

Doctoral Degrees. In 1978-79, both regionally and nationally, the decline in the number of doctoral degrees which had been experienced in the two previous years was revised.(Table A). But the nationwide increase of 1.9 percent was not enough to offset the decrease of the previous years, leaving the total number of doctorates awarded still 4 percent below the high mark of 1974-75. In the South, however, the 4.5 percent increase in number of

---

[2]The report emphasizes distribution of degrees by race, information which is now available from NCES during alternate years. SREB plans to continue the presentation of tabulations more detailed by field in intervening years, when information by race is not reported.

1976-77	33,244	-2.4	2.5	7,475	22.5	-0.2	2.1
1977-78	32,156	-3.3	2.4	7,279	22.6	-2.6	2.0
1978-79	32,756	1.9	2.5	7,606	23.2	4.5	2.1

doctorates awarded brought the annual total to a new all-time level--1.5 percent above the region's 1975-76 high. The South's share of doctoral degrees has expanded to 23.2 percent of the national total from the 8.5 percent share of 1950.

Master's Degrees. For the second year, a decline in the number of master's degrees awarded was experienced, both nationwide (-3.4 percent) and for the South (-.4.2 percent). Master's degrees also accounted for a smaller share of degrees awarded in the South (Table B).

Bachelor's Degrees. The number of degrees awarded at the baccalaureate level remains stable, with only negligible increases nationwide and in the South (Table C). The South's 27 percent share of the nation's baccalaureate degrees about equals the share of undergraduate enrollment. A nationwide trend of bachelor's degrees decreasing as a proportion of all degrees has

1978-79	931,340	0.1	69.7	253,799	27.3	0.3	71.1

been reversed, primarily because of the pronounced decline in number of master's degrees awarded.

First Professional Degrees. The pattern of annual increases in the number of first professional degrees continues unabated nationally (3.4%) and for the South (3.8%) (Table D). In addition, first professional degrees continue the decade-long trend of an increased share of all degrees awarded, now accounting for approximately five percent of the total, both nationwide and in the South.

Table D

FIRST PROFESSIONAL DEGREES AWARDED
1969-70 TO 1978-79

	United States			SREB States			
Year	Number	Annual Percent Change	Percent of Total Degrees	Number	South as a Percent of U. S.	Annual Percent Change	Percent of Total Degrees
1969-70	35,252	--	3.3	9,080	25.8	--	3.5
1970-71	38,276	8.6	3.3	9,514	24.9	4.8	3.4
1971-72	43,774	14.4	3.6	10,666	24.4	12.1	3.6
1972-73	50,435	15.2	3.9	12,718	25.2	19.2	4.1
1973-74	54,278	7.6	4.1	14,154	26.1	11.3	4.3
1974-75	56,259	3.6	4.3	14,273	25.4	0.8	4.2
1975-76	63,061	12.1	4.7	15,394	24.4	7.9	4.4
1976-77	64,780	2.7	4.8	16,001	24.7	3.9	4.5
1977-78	66,964	3.4	5.0	16,438	24.5	2.7	4.6
1978-79	69,222	3.4	5.2	17,068	24.7	3.8	4.8

Associate Degrees. After an unbroken period of growth in the number of associate degrees awarded annually in the nation, the 1978-79 figure of 438,793 represents a decrease of approximately 10,000 degrees from the 1977-78 peak of 449,018 (Table E). In the South, the number of associate degrees increased slightly over 1977-78, and the South's share of associate degrees moved to 27 percent of the national total.

Table E

ASSOCIATE DEGREES AWARDED, UNITED STATES AND SREB STATES
1976-77 TO 1978-79

	Number	Annual Percent Change	Percent of Total	Percent of Total in Arts & Sciences
United States:				
1976-77	440,180	--	25.2	39.7
1977-78	449,018	2.0	24.6	37.9
1978-79	438,793	-2.3	24.7	36.5
SREB States:				
1976-77	114,112	--	25.0	45.9
1977-78	119,190	4.5	24.3	43.4
1978-79	120,011	0.7	25.2	41.7

This second straight year of national decline in associate degrees is almost exclusively concentrated in the Arts and Sciences, which fell by 10,000 degrees to 160,000 in 1978-79.

Data on associate degrees awarded in the broad technology categories show that data processing, and business and commerce continue to be attractive fields. Degrees awarded in data processing increased in the nation 16.0 percent and 27.8 percent for the South, while business and commerce increased

3.4 percent nationwide and 9.6 percent in the South. This growth reflects increased student interest in betterment of employment opportunities upon graduation, as well as the rapidly accelerating use of computers in society.

Overview of SREB State Data

With the exception of degrees at the master's level, the SREB states accounted for an increased share of degrees awarded in the nation in 1978-79. Only in the number of first professional degrees was the eight-year SREB growth in the number of degrees no greater than that for the nation (Table F).

Graduate education in the South continues to reflect overall growth for the region, despite the fact of the second year of decline in the number of master's degrees awarded. The number of doctorates awarded in the South turned upward to a new high of 7,606--following a two-year interruption in growth--bringing the South's share to 23 percent. Decline in the number of doctorates awarded was reported for Arkansas, Louisiana, and Mississippi.

First professional degrees awarded in the South exceeded 17,000, accounting for just under 25 percent of the national total. The eight-year SREB growth rate in the number of first professional degrees awarded (79%) was almost identical with the growth rate for the nation.

The number of associate degrees doubled for the South during the past eight years; and the rate of growth in number of baccalaureate degrees (18.3%) was nearly double that of the nation (10.1%). These differences reflect the later development and rapid growth of higher education in the South. However, not all the SREB states exhibited increases in baccalaureates: Kentucky, Mississippi, West Virginia reported declines for the last two years.

DEGREE COMPLETIONS BY BLACK STUDENTS

Data on degrees awarded black students were first collected by the National Center for Education Statistics in 1975-76, and were presented in SREB's report, Degree Output in the South, 1975-76. Racial information was again collected by NCES (and reported by SREB) in 1976-77 and is planned for biennial collection in the future. Here is an analysis of the 1978-79 data.

Blacks accounted for 6.8 percent of the total associate, bachelor's, master's, first professional, and doctoral degrees awarded in the United States, and for 11.3 percent in the South (Table G). Black representation nationally, and in the South, was highest at the associate level and lowest at the doctoral level. Blacks account for a higher percentage of degrees awarded in the South than in the nation, reflecting higher population levels of blacks, the greater presence of predominantly black institutions in the region, and higher proportions of degree completions by blacks at these institutions.

Compared to 1975-76, the number of degrees awarded to blacks has increased for all degree levels, with the exception of master's degrees, both nationally and in the South. The drop in the number of master's degrees awarded to blacks was 4.6 percent nationally and 6.9 percent in the South. The largest increase in degrees awarded to blacks in the South occurred at the associate level (16.6%) followed by first professional and doctoral degrees--approximately 10 percent.

Table G

DEGREES AWARDED TO BLACK STUDENTS, BY LEVEL;
UNITED STATES AND SREB STATES
1978-79

	United States		SREB States		
	Number	Percent of All Degrees	Number	Percent of All Degrees	South as a Percent of U.S.
Associate*	37,976	8.7	15,033	12.5	40.2
Bachelor's	60,301	6.5	29,490	11.6	48.9
Master's	19,422	6.4	8,285	10.6	42.7
First Professional	2,836	4.1	821	4.8	28.9
Doctorate	1,268	3.9	353	4.6	27.8
Total	121,803	6.8	53,982	11.3	

*Associate degrees and other formal awards involving curricula of at least 2 years but less than 4 years.

The 1978-79 data reveal continued lessening of the role played by historically black institutions (Table H). The predominantly black institutions awarded 30.9 percent of all degrees (excluding associate degrees) received by black students nationally and 56.5 percent in the South--down from 34.9 percent and 62.9 percent, respectively, in 1975-76. Only the number of first professional degrees awarded by predominantly black institutions shows an increase over 1975-76 (Table I).

The number of baccalaureate degrees earned by blacks from predominantly black institutions in the South has fallen off--from 7 out of 10 to 6 out of 10 in three years. This decline is projected to continue, as the rate of growth in black enrollment at predominantly white institutions results in increased degree production by these institutions.

Table H

DEGREES AWARDED TO BLACK STUDENTS AT PREDOMINANTLY BLACK INSTITUTIONS,*
AND PERCENT OF ALL BLACK DEGREE RECIPIENTS,
UNITED STATES AND SREB STATES
1978-79

	United States		SREB States	
	Number	Percent of All Black Degrees	Number	Percent of All Black Degrees
Bachelor's	21,143	35.1	18,141	61.5
Master's	4,110	21.2	3,519	42.5
First Professional	605	21.3	347	42.3
Doctorate	50	3.9	18	5.1

*Predominantly black institutions are those with greater than 50 percent black enrollment (Total headcount, Fall, 1978).

First Professional	+10.2	+3.0
Doctoral	0.0	-30.8
Total	-11.1	-10.0

Fields of Study of Black Students

Degrees awarded to blacks continue to be concentrated in areas which have afforded the most promising career prospects in the past. This is clearly the case in teacher education, where blacks outpace whites in the respective proportions of degrees earned at the master's and doctoral levels by an almost two to one margin.

However, there is discernible movement toward some areas of study currently offering increasingly favorable prospects for black employment and in areas of general manpower shortage. The field of business and management is increasing in popularity with blacks, as a slightly greater proportion of blacks than whites earn baccalaureate degrees in this field. Also, at the master's level, business and management is among those areas of study accounting for the largest increase in degrees awarded to blacks.

In engineering, at both the master's and doctoral level, blacks increased their share of degrees earned, while the proportion awarded to whites declined. (At the baccalaureate level, the proportion of degrees awarded in engineering increased for both blacks and whites.) Also, computer science shows signs of becoming a field of increasing popularity for blacks.

Bachelor's Degrees. The distribution of blacks among fields of study at the baccalaureate level is presented in Table J. Interestingly, not much change has occurred since 1976-77, since the fields flagged for high and low representation remain the same. Nationwide, at the baccalaureate level black representation is highest in the fields of public affairs (11.5% of all degrees in that field), education (9.0%), and library science (8.8%). It is lowest in the fields of agriculture (1.5%), theology (2.6%), engineering (2.8%), foreign languages (2.9%), and physical sciences (3.0%).

Totals	60,301	6.5	100.0	100.0	29,490	11.6	100.0	100.0

It may also be noted that education and public affairs are fields in which black representation equals or exceeds white representation; the same is true for the fields of business and management, psychology, and social science. These five fields account for over 60 percent of baccalaureate degrees awarded to blacks in the South, with education leading, at 25.7 percent, followed by business and management (21.4%), and social sciences (13.4%).

Master's Degrees. The number of master's degrees awarded to blacks in 1978-79 was down 4.6 percent nationally and 6.9 percent in the South, from 1975-76 (Table O). Representation of black graduates at the master's level resembles representation at the baccalaureate level (Table K), with distribution of blacks concentrated primarily in education and public affairs. Blacks, nationally, represented about 10 percent of the total degrees awarded in each of these two fields. Education, while down from the 1976-77 level, continues to account for 56 percent of the black graduates at the master's level, nationally. In the South, education accounts for better than 2 out of 3 black graduates, down from approximately 3 out of 4 in 1976-77. The combination of education with business and management and public affairs accounts for nearly 8 of every 10 black graduates at the master's level, both nationally and in the South.

Doctoral Degrees. Over the two-year period, the number of doctoral degrees awarded to blacks increased 10 percent both nationally and in the South. Education continues to dominate as a field of study--both nationally and in the South--accounting for 49.3 percent of doctorates awarded to blacks,

Totals	19,422	6.4	100.0	100.0	8,285	10.6	100.0	100.0

compared to only 24.2 percent among whites, nationally, and 64.3 percent and 31.9 percent, respectively, in the South (Table L). Psychology and the social sciences were the only two other fields, nationally, in which the number of doctorates awarded to blacks exceeds one hundred. Fields of study for which data show very low production were: library science, and computer science and architecture. Although a fourfold increase in the number of doctorates awarded to blacks in computer science was registered nationally, no degrees were reported for this field in the South for either 1976-77 or 1978-79.

In the South, doctorates awarded to blacks in the field of education, while down from the 1976-77 level, continued to account for almost two-thirds of all doctorates awarded to blacks. Other fields reporting more than 10 degrees awarded were: biological sciences, physical sciences, psychology, social sciences, and theology. The decline in number of doctorates awarded to blacks in engineering in the South was offset by an equal increase in the number awarded nationally, thus resulting in no change over the 1976-77 total number of engineering doctorates earned by blacks.

First Professional Degrees. First professional degrees awarded to blacks in selected fields continued to increase over the 1976-77 level. The increase was 11.8 percent nationally, and 9.6 percent for the South. Law and medicine accounted for the greatest share of degrees awarded, amounting to approximately three-fourths of all first professional degrees, nationally and in the South (Table M). Theology and law accounted for

the largest increase, nationally. Degrees awarded to blacks in dentistry declined both nationally and in the South.

Associate Degrees. Almost 38,000 associate degrees and other formal awards involving curriculums of at least two years were awarded, nationally, to blacks in 1978-79, a 4.3 percent increase over 1976-77 (Table N). In the South, the number of associate degrees awarded to blacks increased by 16.5 percent over the 1976-77 level. The largest increases are found in data processing, and business and commerce. Nationally, the increases were 29.2 percent and 14.4 percent respectively, compared with 74.9 percent and 41.7 percent in the South. The increase in degrees awarded in the technology fields offset a decline in the proportion of blacks receiving awards of arts and sciences or general programs.
